
A. Bivariate map: NTD burden (excl. malaria) × external share of health spending
NTD burden →
External share →
NTD age-standardised DALYs per 100 000: tertile cut-points 107 and 317
External share of current health expenditure: tertile cut-points 1 and 12% (tertiles among low- and middle-income countries)
Darkest = high burden and high donor dependence; white with grey outline = high-income super-region (not classified); hatched = no data
B. Double jeopardy: low- and middle-income countries
Other LMIC super-regions
South Asia
Sub-Saharan Africa
Marker area proportional to NTD DALYs (count); grey lines = medians
High burden, low dependence
High burden, high dependence
Low burden, high dependence
